“Time-zero” Krawtchouk polynomials:

$$p_n(x) = K_n(x/2; 1/2, 0) = \sum_{k=0}^n \binom{n}{k} (-1)^k \left(\frac{x}{2}\right)^{(n-k)} \left(-\frac{x}{2}\right)^{(k)}$$

referring to [DLMF](#), 18.23.3 .

For the tanh-polynomials, we have

$$q_n(y) = \sum_{m=1}^n S(n, m) 2^{n-m} p_m^{\text{Laguerre}}(y)$$

```
